

# Resume

## Priorities:

Integration and system tests were carried out on the three applications. 5 bugs and errors were found, with the following priorities:

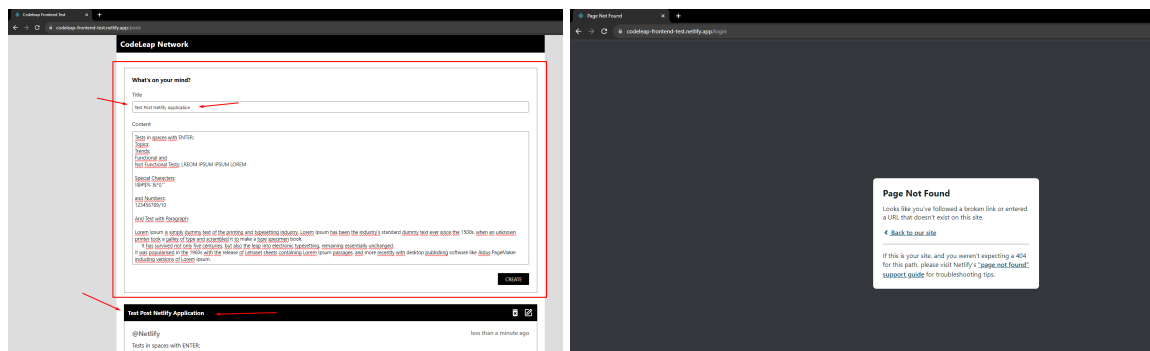

- High: 3 bugs
- Average: 1 bugs
- Low: 1 bugs

## Bugs and Errors:

### Application 1

- Bug 1 (High): When refreshing the page(F5), a 404 error is returned (Page Not Found);
- Bug 2 (Average): When making a post, the text fields continue with the information, allowing you to make multiple identical posts;

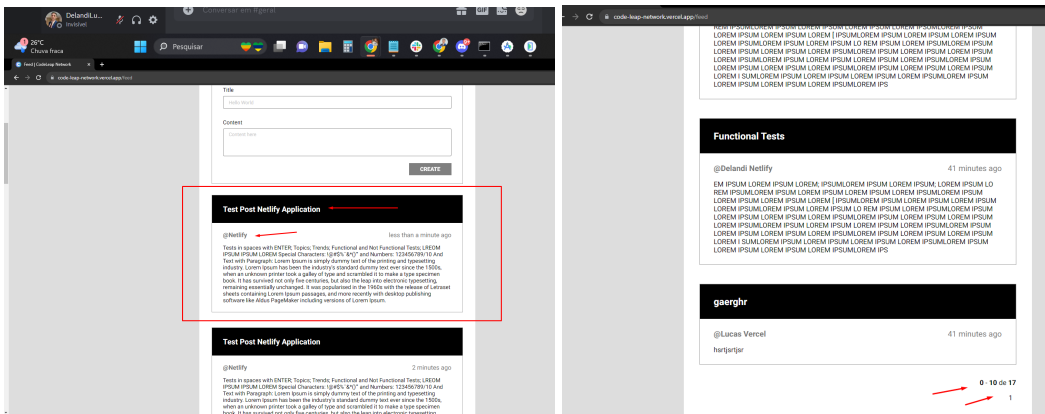

### Images:

### Application 2

- Bug 3 (High): Posts are being displayed ignoring spaces and line breaks introduced when creating the content.
- Bug 4 (Low): Pagination is not working as it should, only counting POSTs, without discounting DELETES.

Images:

Application 3

- Bug 5 (High): The mobile app is crashing when trying to log in with a simple username.

Image:

## Recommendations:

- Bug 1: Store in Local Storage, session to this username logged.
- Bug 2: Clear all text fields after POST.
- Bug 3: Display exactly the information provided by the user in the content field.
- Bug 4: When deleting posts, perform the subtraction operation from POST counts.
- Bug 5: Carry out a new build of the application so that it has the possibility of testing.
